

Bespoke Timber Gates Terms and Conditions

Bespoke Timber Gate Warranty

Our gates are produced for durability, therefore where specified in our quotation the timber gates will come with a 5 year workmanship warranty.

The gate frames are constructed using mortise, tenon and dowel joints to prevent the gates from pulling apart. Structural bracing is then nailed into position. This provides the gate with the strength that is required.

Our Iroko hardwood gates are designed to last for 30+ years but it is the customers responsibility to "care" for their gates. Treatment / stain will need to be applied before installation and re done every 9-12 months to give the gate the protection required. We do offer a pre stain / treatment service, but once again, we recommend re coating every 9 - 12 months.

Our guarantee is against the gate from falling apart at the joints, it does not cover the natural movement of timber which includes bowing, splitting, knots, twisting etc. Movement of a timber gate has to be expected during different seasons of the year and also depends on how well the gate has been treated after it has been hung.
