

Manual Barriers

SW5000S Manual Barrier

Manual Raise Arm Barriers are a low maintenance, cost effective way of manually controlling access to unauthorised or controlled areas. We offer them in spans of up to 7 Metres (Standard Model).

The pivot assembly is made of steel box section, the zinc plated shaft pivots on two heavy-duty stainless steel bearing blocks.

The design of the SW5000S incorporates a locking mechanism, allowing you to fix the barrier in the raised or lowered position prior to applying the padlock. A counter balanced fish tail weight is fine tuned for ease of operation.

The SW5000S comes complete with a lockable end rest, padlock and keys.

Aluminium arm, finished in either alternate red and white or alternate yellow and black vinyl hatching as standard (other colours available.)

Standard Colours: Red/White or Yellow/Black.
